TOPIC ---

The error message, "Outline Font Not Available" appears when I enter text
into TypeAlign running under System 7. What causes this?

DISCUSSION --

This can be caused by two things:

• The outline (printer) fonts may be in the wrong location. Open the
  System Folder and verify that the outline fonts are there. If not,
  locate them and move them to the System Folder.

• If you are using TrueType versions of Helvetica, Courier, Times, and
  Symbol, TypeAlign will be unable to find an Adobe Type 1 version.
  TypeAlign currently does not support TrueType. Either remove the
  TrueType version of the font or use an Adobe Type 1 font instead.

For fullest compatibility, you should be using at least 1.0.5 of Adobe
TypeAlign. Contact Adobe for the latest information; search for Adobe for
contact information.
