## PrintMonitor: Manual Feed Notification (4/94)

Article Created: 21 April 1994

TOPIC -----

I have two computers that print to the same LaserWriter Pro 630 using different applications. On one system, whenever I select manual feed I get a box that says to insert paper in the manual tray and then go to Print Monitor and tell it to print. It prints fine but this is an annoyance. On my other system I don't get this dialog box.

I am using LaserWriter driver version 8.1.1.

DISCUSSION -----

It's very likely that your PrintMonitor Preferences is set differently on the two systems. When the PrintMonitor window is active, select Preferences in the File menu. One of PrintMonitor's preferences is the ability to set:

"When a Manual feed job starts:"  
Give no notification  
Display icon in menu bar  
Also display alert

The system giving you the additional dialog most likely has the third option selected, whereas the one not giving you the error most likely has the first option selected.
