This is the first part of a three part article:

System Software 6.0 Compatibility Report
_____

This is a list of third-party software applications that have been tested by Apple with System Software 6.0.

(NOTE: This report does not cover all Macintosh application software, only those applications that have been reviewed by Apple. For more detailed information on the compatibility of any application with System Software 6.0, please contact the developer or publisher of the software in question.)

This examination did not test every feature of the application. Instead, each application was run through a series of "quick looks" -- launch, open a simple document, open DAs, Cut/Paste, and print.

This report reflects compatibility information on the version number of the application listed, and does not necessarily reflect the most current version of a particular application.

Testing was done on Macintosh(R) Plus, Macintosh SE and Macintosh II personal computers using System Software 6.0. Single Finder was not used unless a memory constraint existed. Ratings for all applications indicate performance of the application running on release CPUs and released System Software.

Where possible, Apple will update this list with new information. Please check HotLinks on AppleLink for updated versions of this report.

The following applications have been rated with an 'A' status.
A = The application runs under System Software 6.0.
