PageMaker 5.0: Faxing From Within the Application (7/94)

Article Reviewed/Updated: 21 July 1994
Article Created: 10 October 1993

TOPIC ---

I cannot fax from PageMaker 5.0 with Express Modem Fax Sender software. The
following symptoms occur whether I'm using Fax Sender software on a GeoPort
Telecom Adapter, an Express Modem on a 68K or Power Macintosh system, or on an
Express Modem in a PowerBook.

Symptoms:
When I use the fax shortcut (pressing Control and Shift keys while selecting Fax
from the File Menu), the following message appears:

   "Cannot build printer list. No valid PPD files were found.
    Check the 'Printer Descriptions' folder in the System Folder. Continue."

If I select 'Fax Sender' in the Chooser, then try to Fax from the File Menu, the
print dialog box appears and hangs when I press the Print button.

If I hold down the option key while selecting Print from the File Menu, the
machine hangs.

DISCUSSION ---

Use this workaround when faxing documents from PageMaker 5.0 using Fax Sender
software:

1) Use the Fax Sender as you would with any other application. Open the
   Chooser and select 'Fax Sender'
2) Select 'Fax' from the File Menu and press the 'Setup' button in the
   print dialog box.
3) The 'Fax Sender Page Setup' dialog box now appears. Make any changes
   necessary. Press 'OK'
4) The 'Fax Sender' dialog box now appears. Type in the fax receiver's
   phone number or choose one from the address book.
5) Press 'Send' to transmit the document.
