Retrospect: Error 108 (out of application memory) (8/93)

Article Created: 19 August 1993

TOPIC ---

What is "Error 108 (out of application memory)" in Retrospect?

DISCUSSION --

Error 108 (out of application memory) means that Retrospect needs more
memory.

What to do: Increase the memory you have allocated to Retrospect by using
the Get Info command from the Finder's File menu. The following is a
guide for how much memory Retrospect will need to back up large volumes:

1,700K for 3,500 files/folders (This is the default setting.)
4,000K for 10,000 files/folders
6,000K for 20,000 files/folders
8,000K for 32,000 files/folders

If you are backing up volumes that contain a large number of files, you may
need more than the recommended amount of memory.

For further information on working with Retrospect and Retrospect A/UX,
search the Tech Info Library by "Retrospect" or "Remote."
