Retrospect: Errors -24201 & -25040 (8/93)

Article Created: 19 August 1993

TOPIC -----

What is the meaning of the following Retrospect errors?

- 24201 (chunk checksum failed)
- 25040 (Catalog invalid or damaged)

DISCUSSION -----

Errors -24201 (chunk checksum failed) and -25040 (Catalog invalid or damaged) mean that a Catalog or other Retrospect 2.0 format file is corrupted.

What to do: If the error occurs when you are trying to back up to a particular StorageSet, you need to rebuild the Catalog for that StorageSet. After the recatalog, reselect this StorageSet in your scripts. If the error occurs when you launch Retrospect, the Retro.Configuration file may be corrupted. Remove this file from the Retrospect Preferences folder and launch Retrospect again. After you do this, you will need to recreate your scripts and other settings.

Alternatively, restore a previous copy of your Retro.Configuration file from one of your StorageSets.

For further information on working with Retrospect and Retrospect A/UX, search the Tech Info Library by "Retrospect" or "Remote."
