Macintosh: Compressed Archives and Error -39 (4/93)

Article Created: 1 April 1993

TOPIC ---

I was trying to open a file that was compressed with DiskDoubler as a
self-extracting archive. I got error -39. Why?

DISCUSSION --

The problem is not necessarily associated with DiskDoubler. When
extracting compressed archives, make sure you have enough room on your
hard disk. Unfortunately, applications do not always display
an error message when needed because of an application problem
or extension conflict.

If you have enough space on the hard disk, try downloading the file again.
The archive may have been damaged during transfer. It is also possible
that the file was defective when compressed. You may want to contact the
individual or group that originally compressed the file.
