## Mathematica: Using Macintosh as a NeXT Front End

This article last reviewed: 18 January 1990

TOPIC -----

I want to use my Macintosh as a front end for Mathematica running on my NeXT computer. Is this possible?

DISCUSSION -----

According to Wolfram Research Technical Support, the Macintosh CAN be used as a front end for Mathematica running on the NeXT computer.

To do this, you need Mathematica for the Macintosh and the NeXT. Wolfram has a document called "Macintosh TCP/IP Installation Guide" -- free to registered owners of Mathematica -- that describes how to use MacTCP and Mathematica to connect to the NeXT computer and how to use the Mathematica kernel on the NeXT computer. To get this document, contact Wolfram Research Technical Support.
