Macintosh II Users Need Excel v1.06

This article last reviewed: 23 March 1988

Macintosh II users may experience system crashes when printing with Excel
version 1.04, and should update to version 1.06.

(NOTE: This is not a consistent problem and is not experienced by all
users.)

Excel v1.04 contains code that modifies itself; this causes problems
with the 68020 instruction cache. The end result can be a system crash.

This problem has been solved on Excel v1.06. Owners of Excel, registered
or otherwise, who have NOT received v1.06 should contact Microsoft for
details on how to update.
