MacLink Plus: Explanation of Errors 106 and 124

This article last reviewed: 8 September 1989

TOPIC ---

I've had a report of errors 106 and 124 appearing in MacLink Plus when going
from Macintosh to Macintosh via the cable provided. What do these mean?

DISCUSSION ---

These errors are generated by, and are specific to MacLink Plus. We
called DataViz Technical Support and received the following information:

Error 106 is a "can't connect error" and occurs when MacLink Plus cannot
complete a connection.

Error 124 is a "port set error". This error indicates that there is a port
conflict. An example of this is having both MacLink Plus and AppleTalk set
to the same port.

For more information, we suggest contacting DataViz Technical Support at
203-268-0030.
