Lotus Notes Client: Macintosh & DOS/Windows Difference (9/95)

Article Created: 19 September 1995

TOPIC -----

I have a problem with Lotus Notes for Macintosh. I'm not actually getting an error, it's more of a missing feature that is annoying to Macintosh users. The problem deals with the default Macintosh window size when selecting a new form in the Compose menu. The default window created is small and must be expanded each time by clicking zoom box. The DOS and Windows version of Notes does not behave this way, that is, the last window size is remembered and used when you create a new form. Is this a Notes Macintosh client issue?

DISCUSSION -----

We spoke with Lotus and received confirmation that the difference in window size is due to the Macintosh Notes client. Lotus is aware of this situation, but has made no commitments as to when, or if, this will be changed in a future release of the Macintosh Notes client.
