HyperCard 2.3.x: Bitmap Printing on Some Power Macintosh (2/96)

```
Article Created: 20 November 1995
Article Reviewed/Updated: 21 February 1996
```

```
TOPIC -----------------------------------------------------------
```

When I try to print from HyperCard 2.3 or HyperCard Player 2.3 from my Power
Macintosh 5200/75 LC, the text from text fields prints bitmapped. HyperCard 2.2
prints stacks fine from the same computer.

```
DISCUSSION ------------------------------------------------------
```

Apple engineering has duplicated this issue with HyperCard 2.3 on Power
Macintosh 7500/100, 7200/90, and 5200/75 LC computers only.

This issue is thought to be related to the HyperCard 2.3 engine, not any
particular stack. HyperCard 2.2 prints fine on these computers.

This issue is being corrected in HyperCard 2.3.5.

However, a separate issue regarding buttons remains with HyperCard 2.3.5. Any
card containing a button with either of these combinations always prints
bitmapped.

Begin_Table

Button Style	Button Attributes
Oval	Auto Hilite, No Icon, Visible
Transparent	Auto Hilite, No Icon, Visible

End_Table

```
Article Change History:
21 Feb 1996 - Updated with HyperCard 2.3.5 and added button issue.
23 Jan 1996 - Change title to reflect some Power Macintosh computers.
