LaserWriter Printers: Using Foil-Embossed Letterhead

Article Created: 05 August 1991

TOPIC -----

Can foil-embossed letterhead be used with any current or past LaserWriter printers?

DISCUSSION -----

Any substance (ink, paper, and so on) used with a LaserWriter printer must be able to withstand the temperature of the fuser roller, which varies between 165 and 180 degrees C. It takes an 8.5-inch by 11-inch piece of paper approximately 5.8 seconds (approximately 1.5 inches per second) to travel over the fuser roller.

Apple doesn't have any documented specifications for using preprinted or foil-embossed letterhead with the LaserWriter printers.
