QuickDraw GX: Slower Print Times With Serial Printers (11/94)

Article Created: 16 November 1994

TOPIC ---

I have installed QuickDraw GX to use with my LaserWriter Select 300. However,
when I try to print a document it now takes longer to spool the pages. Why is
this?

DISCUSSION --

Printing with QuickDraw GX turned on is a little slower. A sample nine page
document with QuickDraw GX turned on, was approximately 40 seconds slower than
with QuickDraw turned off. The issue will be addressed in a future System
Update.
