## Newton Connection Kit for Windows: Missing AM/PM (1/94)

Article Created: 11 January 1994

TOPIC -----

When I open my Newton Connection Kit for Windows and edit my connection files, calendar items do not show up with the proper AM or PM designations.

Also, if I add an item to the calendar and type either AM or PM next to the time, the designation disappears when I close the item.

Why does this happen?

DISCUSSION -----

This situation is caused by the setup of the Connection Kit's time display formats. To display the time in standard 12 hour format with AM/PM designations, follow these steps:

- 1) Open the Windows Control Panel, then open the International Control Panel.
- 2) Select Change from the Time Format section of the control panel. This will display the Time Format dialog box.
- 3) Click 12 hour in the dialog box.
- 4) Enter AM next to the sample time 00:00-11:59 and enter PM next to the sample time 12:00-23:59 by clicking the up and down arrows next to the sample times.
- 5) Close the dialog box and control panels.

The connection files will now display the time with AM/PM designations.
