Apple Two-Page Monitor: Correction to Slot Info in Manual

This article last reviewed: 12 July 1989

TOPIC --

The documentation for the Apple Two-Page Monochrome Monitor states that the
video card must be the card closest to the power supply. Is this necessary,
and, if so, why?

DISCUSSION --

The manual for the Apple Two-Page Monochrome Monitor is incorrect. You can put
the video card in any slot. This statement will be removed from the manual in
its next revision.
