E-Machines DoubleColor SX Bundle: NuBus Adapter

Article Created: 11 November 1992

TOPIC -----

Does the Macintosh IIsi require a NuBus adapter to work with the E-Machines DoubleColor SX Video Adapter plus Macintosh 16" Color Display bundle?

DISCUSSION -----

Apple is bundling the E-Machines DoubleColor SX Video Adapter with the Macintosh 16" Color Display. The DoubleColor SX Video Adapter provides 8-bit video (256 colors) and graphics acceleration.

A Macintosh IIsi NuBus Adapter (part number M0481LL/A) must be used to connect the DoubleColor SX Video Adapter or any other NuBus expansion card to a Macintosh IIsi.
