Display Card 8/24 GC: Compatible Third-Party Monitors

This article last reviewed: 12 June 1990

TOPIC -----

I ordered a Macintosh IIcx with the Display Card 8/24 GC. I am also considering a Radius or RasterOps monitor. Do our 24-bit video cards support third-party, large, color monitors?

DISCUSSION -----

SuperMac is the only company that we are aware of that makes monitors that work with the Display Card 8/24 GC. SuperMac is selling two new monitors that work with the new Apple video cards. One is the "Color Two-Page Display" and the other is the "Platinum Two-Page Display."

Both these monitors have a display resolution of 1152 x 870 pixels. The Display Card 8/24 GC will support up to 8 bits per pixel on these monitors.
