Apple Modem: Testing the connection to the system

There are two simple ways to test the connection between the Apple Modem and
an Apple II, Apple II Plus, or Apple IIe system:

  --To test the connection between the modem and an Apple Super Serial
    Card: From BASIC, type IN#(slot number) Return, Control AT Return,
    ATZ Return. The modem should send back the characters OK to the
    monitor. To test the modem, you can type ATL Return to set the modem
    in loop back test mode.

  --To test the connection between the modem and a non-Apple Serial
    card: From Basic, type PR#(slot number) IN#(slot number) ATL
    Return. The modem should now be in loop back test mode.
