Apple Color Printer: Paper Loading Instructions

Article Created: 6 January 1993

TOPIC ---

This article tells you how to load the various types of paper into the
Apple Color Printer.

DISCUSSION --

The Apple Color Printer's input paper tray holds up to 100 sheets of 20-lb.
paper. If you use heavier paper, fewer sheets fit in the input feeder.
The Apple Color Printer can hold and automatically feed up to five
envelopes. To avoid multiple feeding problems, insert transparencies one
at a time.

NOTES:

• Acceptable Paper: 20-lb. cotton bond paper is recommended when using
  plain paper. The Apple Color Printer can feed 16- to 24-lb. paper.

• Don't mix print material.

• Don't load transparencies, envelopes, and paper in the feeder tray.

A head position lever helps the Apple Color Printer properly feed material
through the print mechanism. Leave the head position lever in position 1
when using coated or medium weight plain paper. When printing images with
heavy graphics, move the head position lever to position 2. Finally, when
using thick paper, envelopes, or transparencies with the Apple Color
Printer, move the head position lever to position 3.
