TrueType: TrueType Already Installed Error (7/94)

Article Created: 18 July 1994

TOPIC ---

When my computer starts up, it gives me an error that says, "TrueType is already installed skipping Installation". What causes this error?

DISCUSSION --

There are two occasions when this error message appears during the startup process:

1) If you are using System 7.x and install the TrueType init in your System
   Folder or Extensions Folder.

   • System 7.x already has TrueType built into the operating system, so
     the TrueType Init is not required. Removing the TrueType Init from
     your System or Extensions folder corrects the problem.

2) If you are using System 6.0.7 or 6.0.8 and get the error message at
   startup, then you have two copies of the TrueType Init installed.

   • Removing the additional TrueType Init from the System folder, corrects
     the problem. Remove the oldest version of the TrueType Init if they
     are different versions.
