LaserWriter: stackunderflow;OffendingCommand:exch Error

Article Created: 28 April 1991

TOPIC ---

Every time I try to print an Excel document on a LaserWriter over AppleShare I
get the message:

     Error: stackunderflow;OffendingCommand:exch

I can print large documents with no problems, but not these small Excel
documents. My document is clear of printer codes, and the page setup is
correct.

DISCUSSION --

That error message indicates that there is a problem with the document, either
just a section of the document or the whole thing. Remove different parts of
the document and copy them to a new document. Then print the new document and
see if it works. If it does, add another piece from the bad document and print
again. Do this until printing fails.

It may also be that your application is creating defective document. Try
replacing Excel.
