LaserWriter IINT/NTX: How To Print Font Samples

This article last reviewed: 23 May 1989

On the disks that come with the LaserWriter II printers is a program called
"LaserWriter Font Utility." This program prints a sample of all fonts
(in 12-point) in the LaserWriter and/or the hard disk attached to a
LaserWriter IINTX. If you want to print the available fonts in multiple
sizes, it is necessary to create your own font sample document.
