Command-Period Doesn't Cancel Print to LaserWriter IISC

This article last reviwed: 10 May 1988

When using the LaserWriter IISC, printing within an application (such as MacPaint) that contains a dialog box requiring the "command-period" to stop printing, you may experience this problem: the "command-period" does NOT stop or interrupt the printing.

However, if you are printing within an application that uses a dialog box with a "cancel" button, the cancel button DOES stop the printing.

This is a problem characteristic of the LaserWriter IISC driver, not the PostScript printer drivers. Currently, you CANNOT cancel most print jobs when programs display a printing message stating "To cancel, hold down the command key and type a period (.)"
