Article Last Updated:

TOPIC ---

This article describes the LaserWriter IIg.

DISCUSSION --

The LaserWriter IIg is an expandable network printer that makes use of
PhotoGrade technology. The unit can print images with more than 65 levels
of gray and smooths jagged edges using FinePrint technology.

Networking

LocalTalk allows for plug-and-play connection to an AppleTalk network. The
LaserWriter IIg has built-in Ethernet features for high-speed EtherTalk
networks. You can simultaneously connect the unit to Ethernet, LocalTalk,
and other serial interfaces. You can also connect it to multiple types of
computers or networks.

The LaserWriter IIg automatically chooses the AppleTalk default zone at the
nearest router. You must change the PostScript instructions to set the
AppleTalk zone differently.

Performance

A high-speed controller and Adobe's PostScript Level 2 software increase
document printing speed up to twice that of the LaserWriter IINTX. The
newest PostScript improves printing speed, adds new capabilities, and is
compatible with existing applications and drivers. The IIg is also
compatible with the Hewlett Packard LaserJet IIP (PCL 4+) emulation
software.
