LW IIg and Pro 630: LocalTalk and EtherTalk Printer Names 6/93

Article Created: 1 July 1993

TOPIC ---

Is the LaserWriter IIg, capable of storing a separate printer name
for LocalTalk and EtherTalk?

DISCUSSION --

The LaserWriter IIg, as well as the LaserWriter Pro 630 (which also
has an EtherTalk port), has separate areas in NVRAM (non-volatile
memory) to store a LocalTalk and an EtherTalk printer name. This
functionality is provided since these printers can have all of their
ports connected to simultaneously. Thus, one could assign a different
name for the printer on a LocalTalk network, and on a EtherTalk
network by using the LaserWriter Utility from Macintoshes on the
respective networks.
