LaserWriter Pro 810: Using the Printer's Control Panel (10/93)

Article Created: 1 October 1993

TOPIC --

This article describes the operator control panel key switches and their
functions.

The printer's control panel lets you take the printer off line (to change
settings) or on line (to print) and access menus for changing the printer's
connection port, paper source, or resolution.

DISCUSSION --

Use the keys on the control panel to display menu options and to change
printer settings. An asterisk (*) appears in the display window next to
any menu item currently selected.

```
KEY             FUNCTION
---             --------
ONLINE          Places the printer online or offline. Note, the printer
                must be offline for the other switches to be functional.

FORM FEED       Ejects the current page from the printer.

MENU            Displays the printer setup menu.

Up and Down     Scrolls up or down through the setup menu.
arrows

RESET           Returns the selected menu item to the default value.

PRINT STATUS    Produces a report that supplements the information on the
                startup page; includes the total copy count, amount of
                memory on the printer, and the downloaded fonts.

ENTER           Selects a menu item to display or select an option.
```
