PostScript Fax Card: Limited Security For Incoming Faxes (3/94)

Article Created: 7 March 1994

TOPIC --

Are there any security options available for the optional PostScript Fax card
when sending and receiving Faxes?

DISCUSSION ---

The only security option we are aware of for the LaserWriter Pro 810 and
LaserWriter Select 360 fax card is through setting a Fax Postscript
password on your printer for incoming fax jobs. This works only with
incoming faxes. Setting up a password is done with the LaserWriter Fax Utility
that is automatically installed with the fax software.

Setting Passwords

The password can be set by choosing the Incoming Fax Settings menu item
under the Configuration menu. Once this is set, people wishing to fax to
your printer must type in the Fax PostScript password in one of two places:

1) The PostScript password field in the Options dialog when they are
   selecting a fax destination.

2) The PostScript password field when setting up entries in their fax phone
   book.

Deleting Passwords

To delete any passwords you have set for the printer, leave the Fax PostScript
Password field blank in the Incoming Fax Settings menu and close the dialog.
This clears out any stored password.
