LW Pro 810: Reading UNIX Network Installer Utility (3/94)

Article Created: 8 March 1994

TOPIC ---

This article explains how to use the UNIX Network Utility Installer that
comes with the LaserWriter Pro 810 when there is not a 3.5-inch floppy
drive on the UNIX workstation.

DISCUSSION --

The UNIX Network Utility Installer is a tar formatted disk that is used
when configuring the LaserWriter Pro 810 in a UNIX environment.

Customers who do not have a UNIX workstation with a 3.5-inch floppy drive
can order the software as a QIC24 tape, or they can use a Macintosh Utility
like the shareware program Suntar to read the tar formatted disk and copy
the files to a Macintosh computer.

Once the files are copied to a Macintosh computer, then the files can be
transferred to the UNIX host using XMODEM, Kermit, or ftp.
