Fax Phone Book: Over 100 Entries Degrades Performance (5/94)

Article Created: 26 May 1994

TOPIC --

I have imported a list of approximately 500 names into the Fax Phone book and it
now takes over 2 minutes to open the phone book after hitting the fax button in
the print dialog box. I have assigned more memory to the fax utility and it
doesn't appear to help.

How many names was the software designed to support? If it is less than 500, is
there a way around this?

DISCUSSION---

There are performance problems when over 100 addresses are added to the Fax
Phone Book. The recommendation is to actually limit the number of addresses in
the phone book to 100 or less. If as many as 1000 addresses are added to the
phone book the system may crash or hang.

With regard to a workaround, the only one we know of is to rename the
phonebooks. You could switch from phone book to phone book by renaming the
current phone book to something else, and renaming the phone book that they want
to use "Fax Phone Book". This is the only known work around.

Engineering is looking into improving the Fax Phone Book in future revisions of
the software. There is no additional information on what the improvements will
be at this time.
