LaserWriter Pro 810: Set, Define, Change Usage (2/97)

Article Created: 7 February 1997

TOPIC ---

I am using the maintenance port on the LaserWriter Pro 810 to change some of the
settings. However, when I issue the SET commands, power off the printer, then
power it back on, the commands are not retained. Why?

DISCUSSION ---

When using the Remote Console Facility (RCF), there are three different commands
you need to use; SET, DEFINE, and CHANGE.

SET

Temporary change. Commands entered using the SET command are lost when the
printer reinitialized.

DEFINE

Permanent change, effective when the printer is reinitialized.

CHANGE

Permanent change, effective immediately.

In your example, the DEFINE or CHANGE command may be more appropriate if the
change needs to be permanent.
