LaserWriter Pro: Software

Article Created: 6 January 1993

TOPIC ---

The LaserWriter Pro 600 and LaserWriter Pro 630 include print driver software
for both Macintosh and Microsoft Windows.

The following operating systems are supported:
*   Macintosh System Software 7.0 and later
*   Macintosh System Software 6.0.7
*   Microsoft Windows 3.0
*   Microsoft Windows 3.1
*   MS-DOS 3.1 and later

DISCUSSION --

Macintosh Software

The Macintosh LaserWriter driver has been modified to support the new features
of the LaserWriter Pro 600 and 630: 600 dpi and up to four paper
input sources. Another feature that has been added is the ability to
print one page from one tray (for example, containing letterhead paper) and
the rest of the document from a different tray (containing, for example, plain
paper). This version of will ship as LaserWriter Driver version 7.2.

The Macintosh LaserWriter Pro software also includes version 7.4 of the
LaserWriter Utility.

With the exception of the Installer script, all Macintosh software components
are identical between the LaserWriter Pro 600 and the LaserWriter Pro 630.

Microsoft Windows Software

The Microsoft Windows 3.0 and 3.1 drivers allow you to select printer
resolution, paper handling, and grayscale options. PhotoGrade is supported by
the Windows drivers.
