## LaserWriter IINTX: ROMs Are v3.0 as of June, 1990

This article last reviewed: 2 July 1990

TOPIC -----

Have the LaserWriter IINTX ROMs been updated to allow software switching back from LaserJet to PostScript? My LaserWriter IINTX manual says you can get the software to switch back, but I am unable to make it work.

DISCUSSION -----

LaserWriter IINTXs (controller board Apple part #M6004/A) are currently shipping with version 3.0 ROMs. The major differences between these and older ROMs are:

- Software switching from LaserJet emulation to PostScript
- Font cleanup in LaserJet emulation
- Better disk management routines
- PostScript 51.8.

The upgrade kit (Apple part #M0445LL/A) is expected to ship (in very small numbers) in the third week of June.

Support Readiness will send upgrade kits (including the new manual) on a one-per-site basis as soon as they are available.
